WORK EXPERIENCE

Programming Tutor

Freelance

January 2018

- Helping new and experienced developers achieve their programming goals whether it was in Java, C++, in web-development, or creating a basic android application

UX Advisor + Database Engineer

Cell-Mate

September 2018

- Responsible for gathering business requirements to design a logical model and build the physical database ensuring the database is always available and kept safe
- Communicated with the UI team to provide feedback to developers as a method of designing a user-friendly application that can be altered without breaking it

UI+UX Developer + Database Admin

J'Adore Inc.

March 2017

- Created a Log-In and Registration form which would store employee data into the database allowing it to be retrieved or manipulated
- Assigning Roles to users and ensuring the application was restricted accordingly and stored data into the database

Seminar Instructor

Ajax Library

June 2016

- Presented on the benefits of developing in a Linux environment
- Educated attendees on how to use Unix and basic shell scripting
